

PREPARED FOR

|                  |                               |
|------------------|-------------------------------|
| Name             | Sarah Thompson                |
| Property address | 24 Wattle St, Glenelg SA 5045 |
| Job requested    | Roof Restoration              |

ESTIMATED COST RANGE  
\$8,500 – \$11,200

DETAILS USED FOR THIS ESTIMATE

|            |                                |
|------------|--------------------------------|
| Job type   | Roof Restoration               |
| Storeys    | Single storey                  |
| Roof size  | 230 m²                         |
| Material   | Concrete tile                  |
| Roof shape | Slopes on all four sides (Hip) |

ESTIMATED COST BREAKDOWN

|                                              |         |
|----------------------------------------------|---------|
| <strong>Materials — \$3,940</strong>         |         |
| Replacement tiles (as needed)                | \$1,380 |
| Ridge capping — bedding compound & pointing  | \$1,180 |
| Sealant / protective coating                 | \$990   |
| Primer                                       | \$390   |
| <strong>Labour — \$4,730</strong>            |         |
| Roof cleaning & preparation                  | \$1,180 |
| Tile replacement labour                      | \$950   |
| Ridge capping — re-bedding & pointing labour | \$1,660 |
| Coating application                          | \$940   |
| <strong>Supporting Items</strong>            |         |
| Tarps & surface protection                   | \$170   |
| Waste bags & disposal                        | \$260   |

WHAT'S TYPICALLY INCLUDED

- Cleaning and preparing the existing roof surface
- Replacing broken or cracked tiles
- Re-bedding and re-pointing ridge capping
- Sealing and re-coating the roof

This is an estimate only, based on the details provided above — not a measurement of your actual roof. A local roofer we connect you with will confirm the final price after inspecting the roof in person. Figures shown are a genuine, itemised estimate, not a binding quote.

## APPENDIX — HOW WE CALCULATE YOUR ESTIMATE

This estimate isn't a random number — it's built from the specific details you provided about your roof. Here's what goes into it, and why.

### Roof size

More roof area means more materials and more labour hours, so this is the biggest single factor in most estimates. A roofer will typically walk or measure the roof itself, not just go off the floor plan, since roof area is usually larger than the house footprint due to eaves and pitch.

### Storeys

A double-storey roof needs scaffolding, safety rails or harness anchor points to meet workplace safety requirements. This adds set-up time before any actual roofing work begins, and it limits how quickly materials and tools can be moved up and down.

### Roof shape

A simple roof (flat or gable) has fewer joins and angles, so sheets or tiles can be laid in longer, more efficient runs. A complex roof with valleys, hips or multiple levels needs more cutting, more flashing at each junction, and more time fitting pieces around angles — all of which adds labour, not just materials.

### Material type

Colorbond, concrete tile and terracotta each have different material costs, different weights (which can affect what the roof structure can support), and different installation techniques. Tile roofs involve individually laying and sometimes cutting each tile; metal roofing is laid in larger sheets but requires precise alignment and sealing at every join.

### Job type

A full replacement means stripping the old roof back to the frame, checking and possibly replacing battens or damaged timber, then installing entirely new material — a bigger job than restoration, which works with the existing structure. A re-coat is lighter still: cleaning, priming and sealing an existing roof rather than replacing anything.

## WHAT A PROPER ROOFER'S QUOTE SHOULD INCLUDE

When a local roofer visits your property, a genuine written quote typically covers:

- A physical inspection of the roof — not just a drive-by — checking tile/sheet condition, ridge capping, flashings and valleys
- An itemised breakdown of materials and labour, not just one lump sum
- Confirmation of who removes and disposes of old materials, and whether that's included
- Any structural concerns found during inspection (e.g. sagging, rot, or damage not visible from the ground)
- A stated warranty period on their workmanship
- Payment terms and an estimated timeframe for the work

*If a quote you receive doesn't include most of the above, that's worth asking about before you agree to anything.*
